(54) Title: **FILTER ELEMENT MOUNTING APPARATUS**

(57) Abstract: A filter element, consisting of two pleated filter cloths (10, 11) has side frame members or strips (16, 17) and top and bottom frame members (13, 14). The top and bottom edges of the cloths are encapsulated in the frame members (13, 14) and the side edges of the filter cloths (10, 11) are clamped by the side frame members. This may be done by moulding the frame members (16, 17) onto the cloth side edges, or by providing a slot in a tubular side frame member within which the side edges are held against the inner face of the slotted wall of the tube by a clamping member, such as a u-shaped strip (33), or by an indented part of the opposed wall.
